New for 2022 is the outstanding Cayman Swim Spa which employs the latest T3 Truwave Turbine Technology to provide the ultimate swim experience. If you are looking for a deep swim spa with the power to accommodate the strongest of athletes or simply looking to enjoy swimming as part of your fitness regime then the Cayman is for you.

The two large integrated grilles at the front of the unit allow the T3 system to create an even flow of water, resulting in a turbulence-free swim current for professional-level swimming exercise. This fully adjustable swim current is wider than your body and deeper than your stroke but, even at full power, it still feels like you're swimming in open water.

Once you've finished your fitness routine there are two hydrotherapy massage seats integrated at the rear designed for immediate muscle recovery. With its stunning looks including LED lighting throughout the Reef Spas Cayman certainly ticks all the boxes.

T3 - TruWave Turbine Technology

The T3 Truwave Turbine Technology creates a smooth, natural and extremely powerful counter-swim current. This wide and deep current can be fully adjusted to meet any swimming speed or ability.

Multiple Cascade Waterfalls

The Cayman has 6 stunning cascade waterfalls each fitted with integrated multicoloured LED lighting to create a stunning "curtain of light" as the water cascades into the swim spa. Waterflow is easily adjusted by a simple dial.

Touch Screen Control

The spaTouch3™ has a user-friendly interface which allows you to adjust the temperature, jets, mood lighting and fully control your integrated sound system.

Technical Information

- 580cm x 220cm x 150cm
- 1 Swimmer & 3 Seats
- 1 Turbine, 30 Pulsar & 6 Air Jets
- 1 Turbine Pump
- 1 Massage Pump
